

## WEBFLEET API Questions / Newsgroup

WORKsmart™-Connect feeds into your existing systems and software to give you a slick and fully integrated fleet management solution

The API WEBFLEET.CONNECT can be used to customize reports or to query information collected through the tracking module and export it back into your existing databases for additional features.

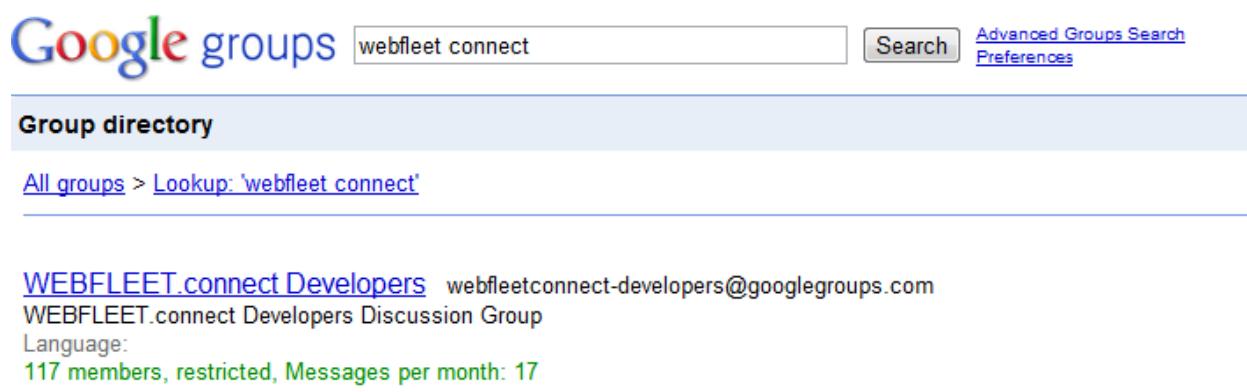

WORKsmart can be paired with your existing dispatch, service, scheduling and accountancy applications for a truly integrated solution. Real-time vehicle and job status information is fed through into these systems, providing you with easy access to working hours data, current and historical journey data, mileage and arrival times. Minimize admin and get all the data you need on a familiar platform.

If you want to feed the order status back into your system in order to start additional services, such as billing or email notification for your client for example, we recommend that you pass a unique identifier for each order through WEBFLEET. This identifier can then be paired with your order in your existing system and your order status can change according to your real-time activity which in return can trigger further events within your company.

### Questions?

We recommend the newsgroup specifically for API developers for any questions that you might have:

<https://groups.google.com/d/msg/webfleetconnect-developers/-/vyhX-0gl89QJ>

The screenshot shows a Google Groups search results page. The search bar at the top contains the text 'webfleet connect'. To the right of the search bar are 'Search' and 'Advanced Groups Search' buttons, and 'Preferences' link. Below the search bar, a 'Group directory' section is visible, with a 'Group' button and a 'View' button. The main content area shows a list of groups, with the first group being 'WEBFLEET.connect Developers'.

Group	Members	Messages per month
WEBFLEET.connect Developers	117 members	17

You'll have to register with this newsgroup first and once your application is granted you'll be able to read the newsgroup on the web and participate or you can also subscribe via email and send in new questions to the following email address: [webfleetconnect-developers@googlegroups.com](mailto:webfleetconnect-developers@googlegroups.com)
